

**Glass cloth base epoxy resin
Flame retardant copper clad laminate**

NP-175FBH-15

■ FEATURES

- Dicy-Free & Low C.T.E
- Lead-Free Compatible
- Excellent dimensional stability and through-hole reliability
- Superior CAF-Resistance (Anti-migration)
- High luminance of multi-functional epoxy contrast with copper for A.O.I
- IPC-4101E L99/101/126
- ANSI type: FR-15.0

■ PERFORMANCE LIST

Characteristics		Unit	Condition	Typical Values	SPEC	Test Method
Volume resistivity		MΩ-cm	C-96/35/90	$5 \times 10^9 \sim 5 \times 10^{10}$	$10^6 \uparrow$	2.5.17
Surface resistivity		MΩ	C-96/35/90	$5 \times 10^8 \sim 5 \times 10^9$	$10^4 \uparrow$	2.5.17
Permittivity 1MHz		-	C-24/23/50	4.4-4.7	5.4 ↓	2.5.5.9
Permittivity 1GHz		-	C-24/23/50	4.1-4.3	-	2.5.5.9

- Keeping the core and prepreg in the same grain direction is crucial to ensure the flatness of multilayer boards.
- Grain direction is shown on the certificate of conformance.
- We recommend to evaluate the drilling property.
- Different oxide treatment may result in variations in the heat resistance properties of the laminates after processing. Pre-production batch runs are recommended to ensure compatibility of materials with chemicals.

Glass cloth base epoxy resin
Flame retardant prepreg

NP-175FBH-15B

FEATURES

- Dicy-Free & Low C.T.E
- Lead-Free Compatible
- Excellent dimensional stability and through-hole reliability
- Superior CAF-Resistance (Anti-migration)
- We recommend to evaluate the drilling property.
- Different oxide treatment may result in variations in the heat resistance properties of the laminates after processing.
- Pre-production batch runs are recommended to ensure compatibility of materials with chemicals.
- High luminance of multi-functional epoxy contrast with copper for A.O.I
- IPC-4101E L99/101/126

PERFORMANCE LIST

Storage Stability

Storage Condition: 20°C, 50% RH for 3 months
: max. 5°C for 6 months

Recommended press cycles:

A:2T2P (2 temperature step/2 pressure step)

B:1T2P (1 temperature step/2 pressure step)

Suggestions:

1. Heating rate of material between 70°C and 140°C
1-3°C/min is acceptable.
1.5-2.5°C/min would be better.
2. Temperature of material over 170°C must be held for at least 60min. to allow epoxy resin to fully cure.
3. The pressure should be kept below 100psi during cooling to ambient temperature.
4. Cooling rate of material should be kept under 2.5°C/min when the temperature of material is over 100°C, in order to avoid introducing twist.
