# 南亞 PVC 止水帶 • Nan Ya PVC Water Stop

在混凝土構造物方面，防止漏水這項工程雖然所佔工程費用不高，但對建築物的品質及效益卻是影響深遠。鑑於各項混凝土作業中的防水施工困擾，本公司特推出了在設計上及施工效果上均極為理想的PVC止水帶—具有多種形狀、規格及堅韌耐用之特性。埋設於混凝土中，能承受混凝土收剪斷應力。即混凝土於靜止狀態下及如上之應力產生時，都能發揮防止漏水的功效。

本公司之止水帶目前已廣泛的使用於各大小土木、水利及建築工程中，並已獲得良好的口碑。

The water leakage protection engineering work in the concrete structures brings great and favorable impact on the quality and effect of the buildings, and yet it costs very little. In order to avoid all the problem existing in the execution of the water protection on various concrete operations, our company has developed and manufactured the PVC water stop which is extremely desirable for designing and operation, and features a variety of forms, specifications excellent resilience and durability.

Buried in the concrete, it can bear the tensile stress caused by the contraction of the concrete and the shearing stress formed by the changes at the joints of the concrete due to sinking of the floor pan. In other works under the static status of the concrete and the time when the above-said stress is generated, it can produce marked effect of water leakage protection. Currently the PVC water stop has been widely used in civil engineering water conservations and building engineering works with excellent public praise achieved.

## ◆ 特性說明 / DESCRIPTIONS OF FEATURES

### • 種類多：

各種形狀皆經專家精心設計，類型多，能配合構造物作適當的選用，並能與混凝土堅固密接，達到完全止水。

### • 材質優：

以特殊配方PVC塑膠製成，不腐不鏽、堅韌又富彈性、不易老化，長年埋設混凝土內亦不受酸、鹼、金屬鹽等浸蝕腐化。

### • 重量輕：

PVC止水帶比重較其他材質為輕，包裝、搬運及施工都極輕便。

### • 接合施工容易：

用美工刀即可裁切，以一般之焊槍、以同材質之軟質焊條焊接，施工迅速，且效果優良，為其他材質所不及，是最容易施工之止水材料。

### • Great Category :

Every shape is elaborately designed by experts. Many models are ready to suit different construction, and can mix with concrete firmly to achieve complete water proof effect.

### • Excellent Material :

Made of specially-formulated plastics, PVC water stop is non-corrosive, rustproof durable and resilient. Long buried in concrete, it will not be eroded by acid, alkali and metallic salt.

### • Light weight :

The PVC water stop is lighter than other materials, thus it's much convenience for packing, transporting and installing.

### • Easy Welding :

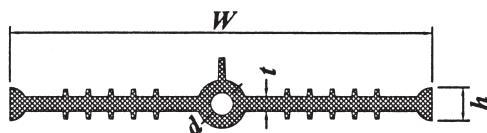

It may be cut with a snap-off cutter, and welded with soft welding rod of same quality and an ordinary welding gun. Its effect on stopping water during the implementation is excellent and no other materials can complete.

# 南亞PVC複合型水膨脹止水帶・Nan Ya PVC Water Stop for Super Absorbent Complex Type

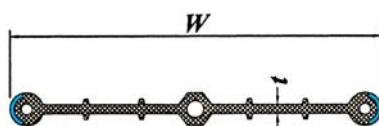

南亞PVC水膨脹止水帶改良傳統式PVC止水帶無法與混凝土完全密合的缺失。針對間隙(GAP)的滲漏等問題，開發出於PVC止水帶的兩端球狀外側半周上，附加吸水膨脹止水材，為一體成型的複合止水帶，並於表面處理一層遮水膜，防止因接觸雨水或地下水所引起的過早膨脹。本遮水膜僅於混凝土鹼性水中被慢慢溶解後，吸水膨脹止水材才開始自動膨脹，填滿間隙，阻止水的滲入。

This water stop is an improvement to the traditional PVC water stop that does not adjoin the concrete completely, causing leak at the gap. It has hydroswelling seal that expands upon contact of moisture added to the outside semi-circumference of the balls on both sides of the PVC water stop and surface treated with a layer of water shield membrane to prevent premature expansion upon contact with rainwater or underground water. Said expansion hydroswelling seal starts to expand automatically after the water shield membrane is gradually dissolved in the alkaline water of concrete and fills the gap to prevent water infiltration.
